Customer Experience Intelligence

Gather and analyze detailed customer data from channels such as surveys, voice, chat, and cases to gain insights into customer behaviors and preferences. Make informed decisions that personalize experiences and enhance customer interactions with AI services, CRM Analytics, and agent actions. Finally, monitor and interpret the insights in CRM Analytics dashboards to identify trends for improved customer engagement.

REQUIRED EDITIONS

Available in: Lightning Experience

Customer Experience Intelligence Setup

Unify and analyze customer data from different sources to improve the customer experience. Select a data space to segregate data within your Salesforce org and enable channels to gather customer data. Choose from various AI services to analyze data, identify patterns, and generate insights. Optionally, use agent actions for real-time and contextual recommendations to handle cases efficiently and resolve issues faster.

CRM Analytics for Customer Experience Intelligence

Customer Experience Intelligence Analytics, a CRM Analytics app, provides a comprehensive set of dashboards for customer service agents and managers. These dashboards analyze customer experiences across various channels and locations, highlight key contact reasons, identify customers who need attention, and offer data-driven insights to improve understanding of customer needs and preferences.

Agent Actions for Customer Experience Intelligence

Gain insights into customer interactions to resolve cases more efficiently. Use agent actions to identify similar interactions across channels, summarize service engagement and product reviews, draft case responses, and generate emails. Additionally, these actions help identify trends in customer experiences and revise product descriptions to better meet customer expectations.

Billing Considerations for Customer Experience Intelligence

Customer Experience Intelligence collects and analyzes customer data from various channels to provide actionable insights that improve the overall customer experience. It's a consumption-based product that uses Einstein and stores and processes data using Data Cloud. Customer Experience Intelligence Signals consumes credits used for billing based on your usage of the feature.

Customer Experience Intelligence Setup

Unify and analyze customer data from different sources to improve the customer experience. Select a data space to segregate data within your Salesforce org and enable channels to gather customer data. Choose from various AI services to analyze data, identify patterns, and generate insights. Optionally, use agent actions for real-time and contextual recommendations to handle cases efficiently and resolve issues faster.

REQUIRED EDITIONS

Available in: Lightning Experience

Enable Customer Experience Intelligence

Enable Customer Experience Intelligence in Setup for insights into customer behaviors and preferences.

Select a Data Space

Select a data space to categorize and organize customer data by attributes such as brand, department, or insights.

Set Up Customer Experience Intelligence Channels

Select standard channels to collect data from customer interactions, such as chat, survey, voice, case, or email. Analyze data from custom objects through custom channels to reveal insights.

Select AI Services

Select the type of data processing you want, such as extracting key phrases, sentiments, targeted sentiments, contact reasons, and entities, and product insights.

Set Up Agent Actions

Optionally, select agent actions to receive real-time AI support for customer cases and issue resolution.

Enable Customer Experience Intelligence

Enable Customer Experience Intelligence in Setup for insights into customer behaviors and preferences.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with Data Cloud enabled and the Customer Exprc Intel add-on

USER PERMISSIONS NEEDED

To enable Customer Experience Intelligence:

Data Cloud Admin permission set

AND

Scoring Framework Admin permission set

To use Customer Experience Intelligence, first [turn on Data Cloud](#).

1. From Setup, in the Quick Find box, enter *Customer*, and then select **Customer Experience Intelligence**.
2. Turn on **Customer Experience Intelligence**.

Select a Data Space

Select a data space to categorize and organize customer data by attributes such as brand, department, or insights.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with Data Cloud enabled and the Customer Expc Intel add-on

USER PERMISSIONS NEEDED

To select a data space:

Data Cloud Admin permission set

1. In the Customer Experience Intelligence setup page, expand **Configure Customer Experience Intelligence**.
2. Next to Data Space, click **Go to Setup**.
3. Select the default data space and save your changes.

Note Customer Experience Intelligence currently supports only the default data space.

Set Up Customer Experience Intelligence Channels

Select standard channels to collect data from customer interactions, such as chat, survey, voice, case, or email. Analyze data from custom objects through custom channels to reveal insights.

REQUIRED EDITIONS

Available in: Lightning Experience

Chat available in: [View required editions](#)

Voice available in: **Enterprise** and **Unlimited** Editions with Service Cloud Voice and Service Cloud Voice External Telephony add-ons

Survey available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Feedback Management - Starter and Feedback Management - Growth licenses

Custom Channels available in: **Enterprise**, **Unlimited**, and **Developer** Editions

USER PERMISSIONS NEEDED

To enable Chat:

[Set Up Messaging for In-App and Web](#)

AND

View All Records on Messaging Sessions

To enable Voice:

[Set Up Service Cloud Voice](#)

To access Surveys:

Salesforce Advanced Features Starter

OR

Salesforce Surveys Advanced Features

AND

Read on Surveys and Survey Responses

To set up custom channels

View All Fields and View All Records on the custom object

Note No user permissions are required to enable Cases. For Chat, Customer Experience Intelligence supports only Messaging for In-App and Messaging for Web channels.

1. From the Customer Experience Intelligence setup page, next to Channels, click **Go to Setup**.
2. To merge customer data from multiple sources into a single, comprehensive view, turn on **Unified Profiles**.

Important After you turn on Unified Profiles, you can't turn it off again.

3. Turn on the channels from which you want to collect data. The list of channels includes Chat, Survey, Voice, Case, and Email.
4. Save your changes.

5. To add a custom channel, from Data Cloud, [create a custom object](#) and make sure that your custom object and custom object fields don't contain the string **CustomChannel**. In the Data Cloud Salesforce Connector permission set for your custom object, enable View All Fields and View All Records permissions.
6. [Create a data stream](#) of the category **Engagement** for the custom object.
7. [Import data](#) from a .csv file into the custom object using the option for File Upload. For details, see the [import limits](#). Additionally, you can use Bulk API 2.0, Bulk API, Salesforce Data Loader, Data Import Wizard, or Amazon S3 Connector to import your custom channel data into Salesforce.
8. From Customer Experience Intelligence Channels, click **Add Channel** under custom channels. Make sure the custom channel name doesn't contain the string **CustomChannel**.
9. Add a channel name, and search for and select the data lake object associated with the custom object. The corresponding data stream is automatically populated.
10. [Map fields](#) from the data lake object to the corresponding fields in your custom object. All fields, except for Customer Name, Customer Email, and Customer Mobile Number, are required.

Fields to Map

Data Lake Object Field Name	Data Type	Field Description
Session Id	Text	The custom object field that uniquely identifies the customer interaction. If the custom object is survey, the survey response ID is mapped with this field.
Thread Id	Text	Uniquely identifies each engagement or exchange with the customer within a session. If the custom object is survey, the survey question response ID is mapped with this field.
Customer Id	Text	Identifies the customer.
Customer Name	Text	Identifies the name of the customer.
Customer Email	Text	Identifies the email ID of the customer.
Customer Mobile Number	Text	Identifies the mobile number of the customer.
Feedback Text	Text	The custom object field for which insights should be gathered based on a text response from the customer.
Feedback Category	Text	Identifies the category of the feedback provided by the

Data Lake Object Field Name	Data Type	Field Description
		customer.
Feedback Rating	Number	Identifies the score provided by the customer.
Feedback Date	Datetime	Identifies the date when the customer provided the feedback.

For example, a passenger survey with the ID ab123a, designed to measure the customer satisfaction score (CSAT), is sent to a customer. The survey contains a question with ID 1234c, asking for the CSAT score, to which the customer responds with a rating of 10.

Survey Invitation ID	Survey Question ID	Survey Response	Survey Name
ab123a	1234c	10	Passenger Survey

This data would then be mapped to the corresponding fields as follows:

Custom Object Field	Mapped Field
Survey Invitation	Session Id
Question	Thread Id
Survey Name	Feedback Category
CSAT Score	Feedback Rating

11. Use the toggle to turn on the custom channel you created and save your changes.

Note You can't edit or delete a custom channel; you can only turn it on or off.

When the Customer Experience Intelligence setup is activated, the data lake objects for the custom channel, their corresponding mappings, and data transforms are deployed automatically. The insights generated are available in the Data Explorer object.

[Amazon S3 Connector](#)

Select AI Services

Select the type of data processing you want, such as extracting key phrases, sentiments, targeted

sentiments, contact reasons, and entities, and product insights.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise, Unlimited, and Developer** Editions with Data Cloud enabled and the Customer Exprc Intel add-on

USER PERMISSIONS NEEDED

To select AI Services:

Data Cloud Admin permission set

AND

Scoring Framework Admin permission set

To use AI Services, first [turn on Einstein Generative AI](#).

1. In the Customer Experience Intelligence setup page, next to AI Services, click **Go to Setup**.
2. Turn on the AI services you want.

AI Service	Description
Contact Reason Extraction	Identify contact reasons or themes to gain insights into customer behaviors and preferences. To build your own contact reasons, click Add Contact Reason to add up to 20 contact reasons. For example, product defects, delivery delays, and customer service quality.
Targeted Sentiment	Identify customer sentiment about specific aspects of a product, service, or experience. For example, the product quality was outstanding, and it met all my expectations.
Sentiment	Measure the overall sentiment of customers for a product or service. For example, the customer rated the service five stars.
Entity Extraction	Identify and categorize specific information from customer interactions or feedback. For example, product and customer names.
Key Phrase Extraction	Extract the most important phrases from a text to summarize key points or reasons for contact from customer feedback. For example, as slow delivery and refund request.

AI Service	Description
Product Insights Extraction	Extract actionable insights from customer feedback, including sentiment towards the product, positive and negative features mentioned in customer reviews, and the reasons customers contacted support.

- To set a minimum length for key phrases or add a contact reason, click **Configure Additional Settings**.
- Select a service between LLM and AWS.
- Select the model or named credential for the service.
By default, LLM and GPT 3.5 Turbo are selected for all AI Services.
- Save your changes.

Set Up Agent Actions

Optionally, select agent actions to receive real-time AI support for customer cases and issue resolution.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise**, **Performance**, and **Unlimited** Editions with Data Cloud enabled, and the Customer Exprc Intel and Einstein GPT Copilot add-ons

USER PERMISSIONS NEEDED

To enable Einstein Copilot for Salesforce:

Agentforce Default Admin

OR

Customize Application

OR

Modify Metadata

To run prompt templates:

Execute Prompt Templates

- In the Customer Experience Intelligence setup page, next to Agent Actions, click **Go to Setup**.
- Click **Review Settings**.
- Turn on **Agentforce**.
- In Agent Builder for any new or existing agent, click **New** and select **Add from Asset Library**.
- In the search box, enter and select **Customer Experience Intelligence**.
- Click **Finish**.
- On the agent actions page, turn on one or more agent actions.

AGENT ACTION	AGENT ACTION NAME IN AGENT BUILDER	DESCRIPTION
Draft an Email with Issue Summary	Draft or Revise Email	Creates a draft email with the key details of an issue.
Summarize Engagement For a Customer	Summarize Service Engagement	Summarizes all engagements for a particular customer to highlight key touchpoints.
Summarize Engagement For a Channel	Summarize Service Engagement	Summarizes all engagements for a specified channel to highlight key metrics and activities.
Summarize Engagement For a Contact Reason or Theme	Summarize Service Engagement	Summarizes all engagements for a specified theme to highlight key interactions and trends.
Draft Response Based on Similar Case Resolutions	Draft Case Response	Identifies a solution for the user's query from cases that were closed with a similar issue.
Find Similar Interactions	Find Similar Interactions	Searches for specific channel names or related terms in interaction records and creates an engagement summary.
Summarize Product Reviews	Summarize Product Reviews	Summarizes customer reviews, identifies top products, and classifies sentiment as positive, negative, mixed, or neutral.
Enhance Product Description	Enhance Product Description	Compares product descriptions with customer reviews and generates enhanced descriptions.

8. Save your changes.

After you've completed the setup, click **Summary** to review your changes and activate the setup. You receive an email about the activation status of Customer Experience Intelligence.

CRM Analytics for Customer Experience Intelligence

Customer Experience Intelligence Analytics, a CRM Analytics app, provides a comprehensive set of

dashboards for customer service agents and managers. These dashboards analyze customer experiences across various channels and locations, highlight key contact reasons, identify customers who need attention, and offer data-driven insights to improve understanding of customer needs and preferences.

Customer Experience Intelligence Analytics Setup

Give your team access to Customer Experience Intelligence Analytics dashboards to analyze and optimize customer interactions.

Use Customer Experience Intelligence Analytics Dashboards

Gain a comprehensive analysis of customer engagement across channels based on customer sentiment, key phrases, contact reasons, and location. Use the new analytics dashboards to monitor trends in Net Promoter Score (NPS), Customer Satisfaction Score (CSAT), and sentiment over time. Gain insights into the sentiment of interactions by each agent and identify customers that need attention based on their engagement frequency and sentiment score.

Customer Experience Intelligence Analytics Setup

Give your team access to Customer Experience Intelligence Analytics dashboards to analyze and optimize customer interactions.

Create a Customer Experience Intelligence Analytics App

Set up and configure Customer Experience Intelligence Analytics for your team to access the dashboards.

Embed Customer Experience Intelligence Analytics Dashboards

Customer Experience Intelligence Analytics includes dashboards you can embed and access in Lightning Experience pages.

Create a Customer Experience Intelligence Analytics App

Set up and configure Customer Experience Intelligence Analytics for your team to access the dashboards.

REQUIRED EDITIONS

Available in: Lightning Experience

Available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions where Customer Experience Intelligence is enabled

USER PERMISSIONS NEEDED

To create a Customer Experience Intelligence Analytics app:

Customer Experience Intelligence Admin

AND

USER PERMISSIONS NEEDED

CRM Analytics Plus Admin

To assign permission sets:

Assign Permission Sets

1. From **Setup**, enter *Customer Experience Intelligence* in the Quick Find box, and then select **Customer Experience Intelligence**.
2. On the Customer Experience Intelligence page, click **Set Up Customer Experience Intelligence Analytics**.
3. Assign user permissions. For users who manage the Customer Experience Intelligence Analytics dashboards, assign the CRM Analytics Plus Admin and Customer Experience Intelligence Analytics Admin permission sets. For users who need read-only access to the dashboards, assign the CRM Analytics Users and Customer Experience Intelligence Analytics User permission sets.
4. Enable CRM Analytics.
5. Enable Customer Experience Intelligence Analytics.

The app installation process can take up to 24 hours. The installation status shows on the Customer Experience Intelligence Analytics Setup page. If the app doesn't have sufficient prerequisites, the installation is skipped with a message explaining steps to meet the prerequisites.

Batch Data Transform

After configuring the CXI Analytics app, ensure that the required batch data transforms are completed and executed in the correct sequence.

Batch Data Transform

After configuring the CXI Analytics app, ensure that the required batch data transforms are completed and executed in the correct sequence.

REQUIRED EDITIONS

Available in: Lightning Experience

Available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions where Customer Experience Intelligence is enabled

To ensure accurate data processing, these Batch Data Transforms (BDTs) are installed as part of the CXI app installation

- CXI Analytics Data Transform: Available in the setup.
- CXI Product Insights BDT: Available when Product Insights is enabled in the setup.

Note BDT 2 (CXI Product Insights BDT) must only run after BDT 1 (CXI Analytics Data Transform) is completed.

Manual Refresh Instructions

When manually triggering the BDTs:

- Trigger BDT 1 (CXI Analytics Data Transform) first.
- After completing BDT 1, proceed with triggering BDT 2 (CXI Product Insights BDT).

Scheduling BDTs

When scheduling the BDTs:

- Ensure BDT 2 is scheduled to run at least one hour after BDT 1.
- Adjust the timing to 30 minutes or up to 2 hours based on the data volume and expected duration for BDT 1 to complete.

Embed Customer Experience Intelligence Analytics Dashboards

Customer Experience Intelligence Analytics includes dashboards you can embed and access in Lightning Experience pages.

Dashboard	Page to Embed	Filter String
Customer Sentiment Overview	Contact, Account, or Lead pages	<pre>{ "cdpObjects": { "CXI_EAT_DF_Sentiment__dlm": [{ "fields": ["CustomerId__c"], "filter": { "operator": "in", "values": ["\$Id"] }, "locked": null, "hidden": null }], "CXI_EAT_Contact_Reason__dlm": [{ "fields": ["CustomerId__c"], "filter": { "operator": "in", "values": ["\$Id"] }, "locked": null, "hidden": null }] } }</pre>
Customer Insights	Contact, Account, or Lead pages in the Service Console	<pre>{ "cdpObjects": { "CXI_EAT_DF_Sentiment__dlm": [{ "fields": ["CustomerId__c"], "filter": { "operator": "in", "values": ["\$Id"] } }] } }</pre>

Dashboard	Page to Embed	Filter String
		<pre> ues":["\$Id"]},"locke d":null,"hidden":nul l}},"CXI_EAT_Contact_R eason__dlm": [{"fields":["CustomerI d__c"],"filter":{"oper ator":"in","value s":["\$Id"]},"locked":n ull,"hidden":null}}}] </pre>

For general instructions, see [Embed Dashboards in Lightning Pages](#).

Use Customer Experience Intelligence Analytics Dashboards

Gain a comprehensive analysis of customer engagement across channels based on customer sentiment, key phrases, contact reasons, and location. Use the new analytics dashboards to monitor trends in Net Promoter Score (NPS), Customer Satisfaction Score (CSAT), and sentiment over time. Gain insights into the sentiment of interactions by each agent and identify customers that need attention based on their engagement frequency and sentiment score.

REQUIRED EDITIONS

Available in: Lightning Experience

Available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions where Customer Experience Intelligence is enabled

The Customer Experience Intelligence Analytics app includes these dashboards.

- Customer Experience Intelligence: Users can embed the dashboard on the home page and it's also accessible through Analytics Studio.
- Customer Watchlist: Accessible through Analytics Studio.
- Customer Sentiment Overview: Users must manually embed the dashboard on record pages.
- Customer Insights: Users must manually embed the dashboard on record pages.

Customer Experience Intelligence

Use the Customer Experience Intelligence dashboard to gain a comprehensive view of your customers' experiences with your team's interactions. Analyze sentiment, engagement metrics, and trends to assess customer satisfaction and service performance.

Customer Watchlist

Use the Customer Watchlist dashboard to identify customers who require prompt attention based on the duration since their request initiation to prioritize customer support efforts effectively.

Customer Insights

The Customer Insights dashboard assists customer service agents analyze their customer engagement performance across channels, based on sentiment, top contact reasons, and overall engagement score. This dashboard is embedded in the Service Console for customer service agents.

Customer Sentiment Overview

The Customer Sentiment Overview dashboard, embedded on the Contact, Account, or Lead page, assists customer service agents in analyzing customer sentiment on interactions. The dashboard provides insights based on overall sentiment, channels, and the top contact reasons categorized by sentiment.

Product Insights

Use the Product Insights dashboard to analyze customer engagement for specific products across various channels, focusing on sentiment, key influencing factors, contact reasons, and location. Monitor trends in Net Promoter Score (NPS), Customer Satisfaction Score (CSAT), and sentiment over time to identify patterns in customer satisfaction and refine your support strategy accordingly.

Customer Experience Intelligence

Use the Customer Experience Intelligence dashboard to gain a comprehensive view of your customers' experiences with your team's interactions. Analyze sentiment, engagement metrics, and trends to assess customer satisfaction and service performance.

REQUIRED EDITIONS

Available in: Lightning Experience

Available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions where Customer Experience Intelligence is enabled

Filter the analytics charts and metrics in the dashboard based on EAT Channel Source Type for a specific time period and select a period to compare the metrics performance.

- View the CSAT and NPS for various KPIs such as customer satisfaction, responses, interactions, and sentiments. You can also compare the KPIs performance for the selected duration to a previous period. (1)
- To know more about the customers that need your attention, use the link to open the Customer Watchlist dashboard. (2)
- View the total number of customer responses and the distribution of responses based on sentiment such as mixed, negative, or positive. (3)
- View the customer sentiment based on contact reasons, product, entity, and key phrases. (4)
- View the overall sentiment of customers for each location. (5)
- View the customer sentiment for each interaction and by agent. (6)
- View the trends for sentiment, CSAT, and NPS to analyze changes in customer feedback over time. (7)
- Use the Create Records button to create multiple cases simultaneously directly from the Customer Experience Intelligence dashboard. (8)

The dashboard also offers quick navigation to the Customer Watchlist and Product Insights dashboards for seamless access to key data.

Key Performance Indicators in Customer Experience Intelligence Dashboard

Learn the calculations of key metrics shown in Customer Experience Intelligence dashboard.

Key Performance Indicators in Customer Experience Intelligence Dashboard

Learn the calculations of key metrics shown in Customer Experience Intelligence dashboard.

METRIC	CALCULATION
Customer Satisfaction	The average of CSAT (Customer Satisfaction Score) scores or the NPS (Net Promoter Score) score, where NPS is calculated from (number of promoters - number of detractors) / total number of responses for CSAT.
Number of Responses	Total count of responses for CSAT or NPS.
Total Interactions	Count of thread IDs.
Unique Customers	Count of unique participant IDs where the participant type is End user.
Customer Sentiment	Percentage of responses that are positive or negative.
Overall Sentiment	Count of each sentiment type.
Contact Reason	Top contact reasons by count and the corresponding sentiment count for each contact reason.
Contact Reasons and Key phrases	Top contact reasons and keyphrases by count.
Sentiment by Location	Count of sentiment by each location.
Sentiment - Trend	Show sentiment trends over time.
CSAT	Show CSAT trends over time.
NPS	Show NPS trends over time.
Customer Sentiment across Channel	Count of sentiment by channel.
Customer Sentiment across Product	Count of sentiment by product.
Customer Sentiment across Contact Reason	Count of sentiment by contact reason.
Customer Sentiment across Entity	Count of sentiment by entity.

METRIC	CALCULATION
CSAT/NPS - Team Performance	CSAT/NPS scores by agents.
Sentiment - Team Performance	Sentiment count by agent.

Customer Watchlist

Use the Customer Watchlist dashboard to identify customers who require prompt attention based on the duration since their request initiation to prioritize customer support efforts effectively.

REQUIRED EDITIONS

Available in: Lightning Experience

Available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions where Customer Experience Intelligence is enabled

Filter the dashboard data by region, customer, channel, and duration, and then sort by the number of interactions and customer sentiment for further insights.

Key Performance Indicators in Customer Watchlist Dashboard

Learn the calculations of key metrics shown in Customer Watchlist dashboard.

Key Performance Indicators in Customer Watchlist Dashboard

Learn the calculations of key metrics shown in Customer Watchlist dashboard.

METRIC	CALCULATION
Total Customers	Count of customers based on selected interactions and sentiment sliders.
Customer Type	Category to which the customer belongs. The possible values are account, contact, or lead.
Last Engagement Date	Date of the most recent interaction with the customer.
Last Engagement Channel	Channel used in the most recent interaction with the customer.
Last Sentiment	Last sentiment recorded by the customer for the given time period.
Overall Sentiment	Sentiment that occurred most frequently during

METRIC	CALCULATION
	the given time period.
Total Interactions	Count of all interactions associated with a specific customer ID.
Total Channels	Count of unique channels in which the customer has engaged during the specified time period.

Customer Insights

The Customer Insights dashboard assists customer service agents analyze their customer engagement performance across channels, based on sentiment, top contact reasons, and overall engagement score. This dashboard is embedded in the Service Console for customer service agents.

REQUIRED EDITIONS

Available in: Lightning Experience

Available for an additional cost in: **Enterprise, Unlimited, and Developer** Editions where Customer Experience Intelligence is enabled

METRIC	CALCULATION
Engagement Score	An index that tracks customer interaction and satisfaction across various channels. The score is calculated based on several factors—session counts, threads, sentiment (negative, positive, mixed), CSAT, and NPS—over the past 90 days. A higher Engagement Score indicates greater customer dissatisfaction and highlights areas of distress.

Customer Sentiment Overview

The Customer Sentiment Overview dashboard, embedded on the Contact, Account, or Lead page, assists customer service agents in analyzing customer sentiment on interactions. The dashboard provides insights based on overall sentiment, channels, and the top contact reasons categorized by sentiment.

REQUIRED EDITIONS

Available in: Lightning Experience

Available for an additional cost in: **Enterprise, Unlimited, and Developer** Editions where Customer Experience Intelligence is enabled

Product Insights

Use the Product Insights dashboard to analyze customer engagement for specific products across various channels, focusing on sentiment, key influencing factors, contact reasons, and location. Monitor trends in Net Promoter Score (NPS), Customer Satisfaction Score (CSAT), and sentiment over time to identify patterns in customer satisfaction and refine your support strategy accordingly.

REQUIRED EDITIONS

Available in: Lightning Experience

Available for an additional cost in: **Enterprise, Performance, and Unlimited** Editions where Customer Experience Intelligence is enabled

Filter the analytics charts and metrics in the dashboard based on region, product family, product, channels and a specific time period.

- View the overall sentiment of customers for the selected product, the number of responses received, and the positive and negative factors influencing the product's sentiment, helping identify areas for improvement. (1)
- View the trends in sentiment, Customer Satisfaction (CSAT) score, and Net Promoter Score (NPS) to monitor changes in customer satisfaction and sentiment, and identify patterns in feedback. (2)
- View the key factors that influence customer sentiment to identify aspects that either positively or negatively impact customer perception and satisfaction. (3)
- View the key reasons customers contact support to identify concerns that are common and that need more attention.(4)
- View the overall sentiment of customers by location. (5)

Key Performance Indicators in Product Sentiment Insights Dashboard

Learn the calculations of key metrics shown in Product Sentiment Insights dashboard.

Key Performance Indicators in Product Sentiment Insights Dashboard

Learn the calculations of key metrics shown in Product Sentiment Insights dashboard.

METRIC	CALCULATION
Overall Sentiment	The sentiment (positive, negative, or mixed) with the highest number of responses.

METRIC	CALCULATION
Customer Sentiment	Percentage of responses classified as positive or negative.
Number of Responses	Total count of customer responses received.
Positive Factors	The factors contributing positively to product sentiment.
Negative Factors	The factors contributing negatively to product sentiment.
Customer Satisfaction (CSAT)	Calculated as the average of CSAT scores or the NPS score. NPS is derived from: (Number of promoters - Number of detractors) / Total number of responses for NPS.
Contact Reason	Top contact reasons by count.
Sentiment by Product	Customer sentiment for each product based on received responses, including both positive and negative factors.
Sentiment Trend	The sentiment trends over time based on sentiment scores.
CSAT Trend	The CSAT trends over time based on CSAT scores.
NPS Trend	The NPS trends over time based on NPS scores.
Sentiment by Key Factors	Count of sentiment based on key factors influencing customer responses, identifying whether specific factors create positive or negative responses.
Responses by Contact Reasons	Count of customer responses for each contact reason.
Sentiment by Location	Count of sentiment by each location.

Agent Actions for Customer Experience Intelligence

Gain insights into customer interactions to resolve cases more efficiently. Use agent actions to identify similar interactions across channels, summarize service engagement and product reviews, draft case responses, and generate emails. Additionally, these actions help identify trends in customer experiences and revise product descriptions to better meet customer expectations.

REQUIRED EDITIONS

 Available in: Lightning Experience

Customer Experience Intelligence Agent Actions Use Cases

Agent Action	When to Use	Example
Summarize Service Engagement	Use the Summarize Engagement For a Customer action to gain insights into customer experiences by summarizing specific customer engagements.	What's the latest on the issue with the iPhone?
	Use the Summarize Engagement For a Channel action to gain insights into customer experiences by summarizing engagements for a specific channel.	What's the top issue highlighted in the surveys?
	Use the Summarize Engagement For a Contact Reason or Theme to gain insights into customer experiences by summarizing engagements for a specific theme.	What's the top issue in billing?
Draft Case Response	Use the Draft Response Based on Similar Case Resolutions action to address user queries faster by referencing solutions from similar, previously resolved cases.	Find a solution for cases similar to issues involving incorrect product deliveries.
Draft or Revise Email	Use the Draft an Email with Issue Summary action to create emails that summarize customer issues.	Create an email that summarizes a service outage, its cause, and the resolution plan.
Find Similar Interactions	Use this action to search for specific channel names or related terms in interaction records and create an engagement summary for the specified channels or all channels.	Find the similar interactions for the issue for iPhone in case channel?

Agent Action	When to Use	Example
Summarize Product Reviews	Use this action to summarize customer reviews, identify top products, and classify sentiment as positive, negative, mixed, or neutral.	What are the top products with positive reviews?
Enhance Product Description	Use this action to compare product descriptions with customer reviews and generate improved descriptions.	Suggest an updated product description for the iPhone 16.

Set Up Draft Case Response and Find Similar Interactions Agent Actions

To set up the Draft Case Response and Find Similar Interactions actions, create a vector search index configuration.

Set Up Summarize Service Engagement Agent Action for Themes

To set up the Summarize Service Engagement agent action for customer engagement themes, create a vector search index configuration.

Set Up Draft Case Response and Find Similar Interactions Agent Actions

To set up the Draft Case Response and Find Similar Interactions actions, create a vector search index configuration.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise**, **Performance**, and **Unlimited** Editions with Data Cloud enabled, and the Customer Exprc Intel and Einstein GPT Copilot add-ons

USER PERMISSIONS NEEDED

To create a search index configuration:

Data Cloud Admin

OR

Data Cloud Marketing Admin

OR

Data Cloud Data Aware Specialist

1. From the App Launcher, find and select **Search Index**.
2. Create a search index configuration of the type **Advanced Setup**.
3. Select **Engagement Analysis Text** and click **Next**.
4. Click **Manage Fields** and select **Engagement Analysis Payload**.
5. Save the changes and click **Next**.
6. Select **E5 Large V2 Embedding Model** as the Vectorization Strategy, and click **Next**.
7. Expand **Engagement Analysis Text** and drag **Engagement Channel Source Type** into the Selected fields region.
8. Click **Next** and save the changes.

When saving the search index, make sure to use the default label and API name.

Set Up Summarize Service Engagement Agent Action for Themes

To set up the Summarize Service Engagement agent action for customer engagement themes, create a vector search index configuration.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise**, **Performance**, and **Unlimited** Editions with Data Cloud enabled, and the Customer Exprc Intel and Einstein GPT Copilot add-ons

USER PERMISSIONS NEEDED

To create a search index configuration:

Data Cloud Admin

OR

Data Cloud Data Aware Specialist

1. From the App Launcher, find and select **Search Index**.
2. Create a search index configuration of the type **Advanced Setup**.
3. Select **Engagement Analysis Text Insight** and click **Next**.
4. Click **Manage Fields** and select **Parsed Response**.
5. Save your changes and click **Next**.
6. Select **E5 Large V2 Embedding Model** as the Vectorization Strategy, and click **Next**.
7. Click **Next** again and save the changes.

When saving the search index, make sure to use the default label and API name.

Billing Considerations for Customer Experience Intelligence

Customer Experience Intelligence collects and analyzes customer data from various channels to provide actionable insights that improve the overall customer experience. It's a consumption-based product that uses Einstein and stores and processes data using Data Cloud. Customer Experience Intelligence Signals consumes credits used for billing based on your usage of the feature.

REQUIRED EDITIONS

Tip For this product, you can access Digital Wallet, a free account management tool that offers near real-time consumption data for enabled products across your active contracts. Access Digital Wallet and start tracking your org's usage. To learn more, see [About Digital Wallet](#).

Available in: Lightning Experience

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with Data Cloud enabled and the Customer Expc Intel add-on

CaRD	TYPE	DESCRIPTION	NOTes
Customer Experience Intelligence Signal	Customer Experience Intelligence Signal	Usage is calculated based on Experience Signals.	See Service Cloud Billable Usage Types
Einstein Requests	Einstein Requests	Usage is calculated based on API calls to the LLM gateway.	See Einstein Usage
Data Services	Batch Data Pipeline	Usage is calculated based on the amount of batch data processed by Data Cloud data streams across all connectors.	Batch data pipeline is used to ingest data into Data Cloud if you select the CRM Connector during feature setup.
Data Services	Data Queries	Usage is calculated based on the number of records processed. The count of records processed	See Data Cloud Billable Usage Types

CaRD	TYPE	DESCRIPTION	NOtes
		depends on the structure of a query as well as other related factors such as the total number of records in the objects being queried.	
Data Services	Streaming Data Pipeline	Usage is calculated based on the number of records ingested by data streams with stream processing. Data streams with stream processing include web, mobile, and streaming ingestion API.	Streaming data pipeline is used to ingest data into Data Cloud if you select the Custom Connector during feature setup.
Data Services	Streaming Actions (including lookups)	Usage is calculated based on the number of records processed. A lookup is an enrichment from a related object.	See Data Cloud Billable Usage Types
